

INDOOR HYDROPONIC FARMING

ROBOTFARM®

RobotFarm®

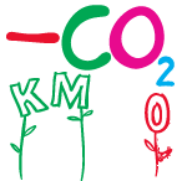

RobotFarm® makes accessible to all the production of vegetables at 0 meters. Agricultural competences are not necessary in order to cultivate with this machine.

It is enough to have electric energy because RobotFarm® creates autonomously the ideal growing conditions, with fully computerized management; climate and irrigation are managed automatically from planting to harvest.

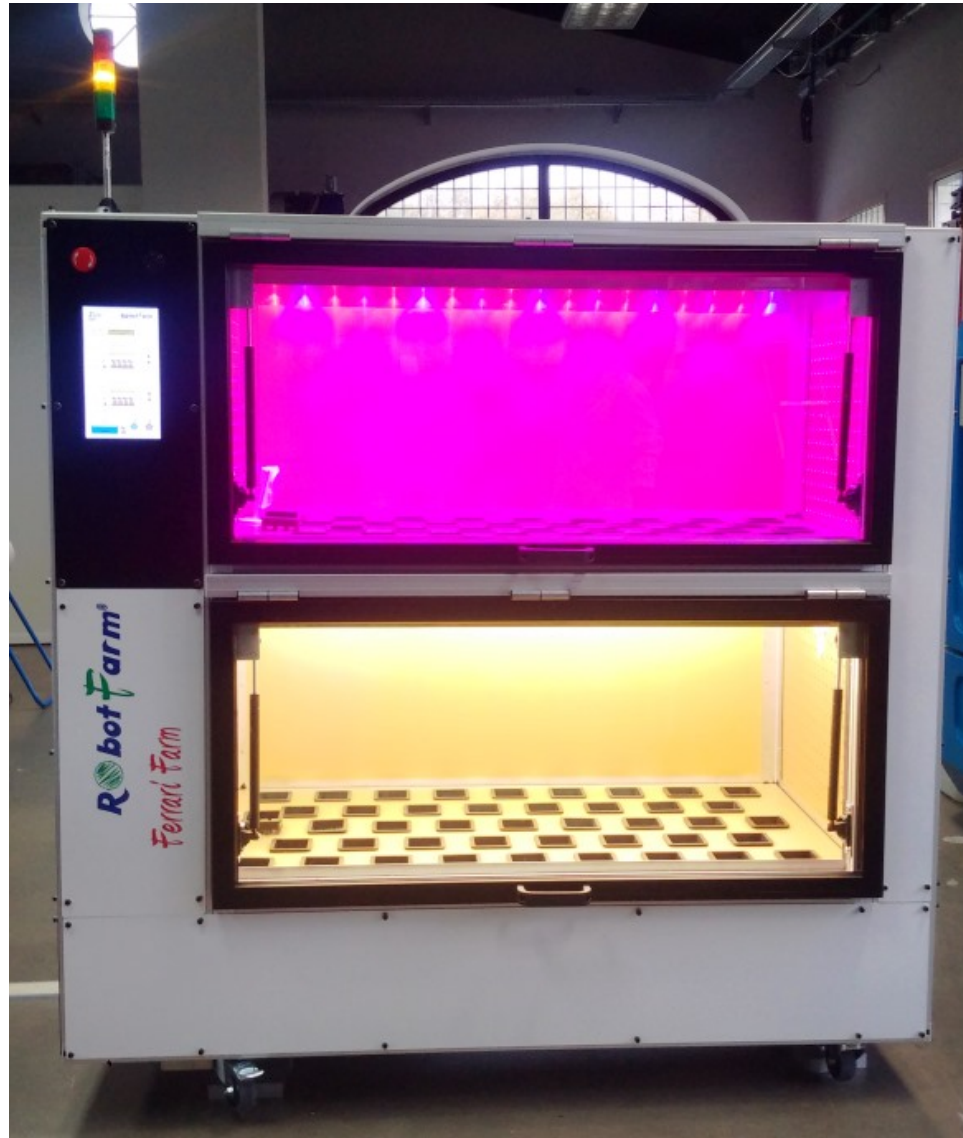

With this technology are achievable production machine of every size, even in shelter version.

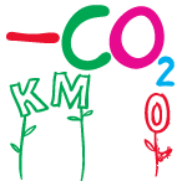

The picture shows an embodiment which has production capacity of 2 plants/day continuously for the entire year.
